

Face Rejuvenation that Lasts for Years

With age, our skin gets thinner, drier and we lose elastin. Eventually, wrinkles, creases, and lines form on our skin and we become unhappy with how we look in the mirror.

WHAT'S ENDOLIFT?

ENDOLIFT® IS A CUTTING EDGE MINIMALLY INVASIVE ALTERNATIVE TO A SURGICAL FACELIFT AND/OR SURGICAL LIPOSUCTION

Endolift® laser energy targets specific treatment areas to stimulate multiple responses. Mechanical contraction giving immediate skin tightening and firming, improvement of skin «architecture» through the production of collagen, skin surface rejuvenation and fat reduction by through the emulsification of fat cells.

Originally designed as technology for contouring the middle and lower face without surgery it is now recommended for scars, defining the chin line, lower eye bags, tightening the jaw and neck area, as well as the body including the abdomen, thighs, saggy elbows and knees. Endolift is a treatment that is ideal for men and women above the age of 40.

Results are both immediate and long-term as the treated area will continue to improve for several months following the procedure as additional collagen builds in the deeper layers of the skin.

ADVANTAGES

-  Only one session
 -  Outpatient treatment
 -  No incisions
 -  No downtime
 -  Safe, visible and immediate results
 -  Long-term effect
 -  Pain free but mild local anaesthetic provided if needed
 -  Possibility of therapeutic combination to improve results even further with several aesthetic treatments including CO2 laser, proflilo and botox
-

ANKLES before/after

HOW DOES IT WORK?

THE ENDOLIFT® offers the benefit of a surgical facelift but it is scalpel, scars and pain-free.

Following local anesthesia, a laser-emitting wire, slightly thinner than the hair, is introduced under the skin. With precise and delicate movements, the laser energy target specific treatment areas.

The laser-induced selective heat applied during the procedure melts the fat cells, which flow out of the microscopic channels. The loss of fat causes immediate skin retraction and tightening drastically reducing skin laxity. The laser procedure also triggers the stimulation of collagen production, meaning the skin's appearance will continue to improve for months after the treatment.

Key Benefit Summary

- **Remodels the skin, creating new collagen which lifts and tightens.**
- **Tones the treated area, resulting in a more contoured appearance (e.g. Jawlines)**
- **Reduce heavy jowls, double chin and lower face.**
- **The area continues to refine and improve in texture, even months after treatment.**
