

MYELLEVATE®

MEDISPA
AESTHETICS • WELLNESS • ANTI-AGEING

Define & Enhance the Jawline

The MyEllevate procedure is a minimally invasive facial rejuvenation solution that helps to refine the lower face and jawline with natural-looking, long-lasting results.

WHAT IS THE MYELLEVATE PROCEDURE?

MyEllevate™ is a ground-breaking minimally invasive cosmetic procedure that lifts sagging skin around the neck and jawline for a smoother appearance that takes years off your appearance in only an hour. MyEllevate requires no general anesthesia and comes with far less bruising than conventional plastic surgery. MyEllevate is ideal for those who wish to see dramatic results without downtime.

HOW IS MYELLEVATE PERFORMED?

Prior to the MyEllevate neck lift, a local anesthetic is applied to eliminate pain and discomfort. The skin will be marked to help guide Dr. Rohit through the procedure. Then, Dr. Rohit will perform the following steps:

- 1.** Make small punctures along the jawline. These punctures will be the access points of the Suturod® device.
- 2.** Utilise LED light guidance to insert the Suturod® device and strategically place sutures beneath the skin over the neck muscles and glands.
- 3.** The sutures are then pulled to lace the underlying neck structures tightly together.
- 4.** Lastly, the device is removed, and the punctures are closed with dissolvable sutures.

The mechanism of lift is often described as “lacing up shoelaces” to pull the neck upward with the entire procedure taking around one hour to perform. It can be performed by itself or combined with other minimally invasive treatments, such as liposuction as well as other energy-based treatments like Endolift or RF Microneedling to generate more collagen. Although minimally invasive, MyEllevate is an advanced cosmetic procedure that requires special training and extensive knowledge of the face and neck anatomy. Dr. Rohit has over 22 years of combined medical experience as a plastic surgeon for traumatic injuries, congenital deformities, and facial aesthetics.

WHAT ARE LIGHT-GUIDED NECK SUTURE?

The light-guided suture system is a state-of-the-art technology enabling surgeons to perform a minimally invasive and incision-free neck lift. Sutures lift and tighten the underlying neck layers to sculpt the neck and give it a younger appearance.

With LED light guidance, surgeons can strategically and accurately place permanent sutures inside the neck tissue without making incisions. The Suturod® is a surgical device that works like a needle and a thread, guided by light. It's composed of a specialized rod with a fiber optic core, attached sutures, and an LED light source at one end.

By transmitting LED light through the neck tissue to the exact locations, where the sutures need to be placed can be pinpointed. With the Suturod® light-guided technology, the surgeon can weave the underlying neck muscles and glands together with permanent neck sutures to achieve a slimmer and smoother neck contour.

WHAT IS RECOVERY LIKE AFTER MYELLEVATE?

Since it's a minimally invasive procedure, the MyEllevate neck lift requires little downtime, and the recovery is relatively fast. You can resume your normal activities almost immediately after your treatment. Most patients need about 4 days to recover from the MyEllevate procedure, during which you may need to wear a chin strap.

You might experience minor discomfort, bruising, and swelling for about ten days, especially if you get liposuction. You may also experience some tightness or dimpling in your skin after the procedure. These minor side effects should subside within a few days.

WHAT ARE THE BENEFITS OF MYELLEVATE?

The MYELLEVATE neck lift offers the same results as a surgical neck lift but with the following benefits:

- Imperceptible scarring – it doesn't require incisions, only small puncture holes in the neck that heal nicely
- It is a short procedure – it takes about an hour
- Minimally invasive procedure with little to no downtime
- Long-lasting results lasting five years or longer following treatment
- Enhances self-image and self-confidence
- Low risk of post-operative complications
- Lower cost compared to a surgical neck lift

WHO IS A GOOD CANDIDATE FOR MYELLEVATE?

MyEllevate is suitable for anyone with early signs of aging in the neck and around the jawline who doesn't want to undergo invasive surgery with lengthy downtime.

You can consider getting this state-of-the-art neck rejuvenation procedure if:

- Your neck is starting to bulge out a little
 - You have extra fat under your chin and along your jawline
 - Your jawline is starting to lose its definition
 - You have neckbands
 - You have some loose skin on your neck
 - You don't want any incisions in your neck, on the sides of your face, or behind your ears
-

WHEN WILL I SEE RESULTS?

Marked changes will appear in the jawline directly after your MyEllevate session, but with mild swelling, you may not see them right away. As the swelling subsides, you'll begin to notice increased definition in the neck as well as a reduction in vertical banding. Your outcome will continue to improve over time as the body's natural supply of collagen is replenished. Your results are expected to last 5-years+ on average.

The **MyEllevate** technique utilizes the ICLED® Suturod® device, the first and only patented light-guided technology for facial cosmetic procedures, to accurately place sutures without incisions. It takes approximately one hour to perform with a one-time use disposable system. The **MyEllevate** solution offers fast recovery and restores a youthful appearance.
